

### The Wrecking and Cleaning Crew

If senescent cells are like an old building, consider **Stem-O-lytic** and apoptosis as the wrecking crew. Once done demolishing the building, all kinds of debris remain preventing the construction of a new one. The immune system cleanup crew comes in to clear the rubble.\*

The process of demolition and clean up of senescent cells is ongoing daily. For best results, take **Stem-O-lytic** every other day—one day for demolition and the other for clean up.

## This is My Business

## Feel Healthier. Enjoy More.

# Stem·O·lytic™

## Regenerate Youthfulness

  
**sisel**

## The Problem with Cellular Decline

Cells divide and maintain replacement cells so that the body can grow. Once the cell has reached its maximum division rate and degenerative decay, it becomes senescent. The cell then emits a mixture of toxic molecules marking it for elimination by the body's immune system to allow for continued cellular regeneration.

As we age our immune system becomes dumbed down due to decay and can fail to fully recognize these toxic senescent cells. Left unchecked, senescent cells will continue to pump out extremely dangerous chemicals as a call for help. When no help comes, these same toxins can damage the healthy systems around them causing myriad problems, including accelerated aging.

# Increase Longevity and Youthfulness with Stem•O•lytic™

Scientists made a critical anti-aging discovery when they observed that cells have a limited number of divisions before they become dormant or senescent. This limitation is due to the shortening of telomeres accompanied by decay and degeneration in stem cells.

Under normal conditions—and through a process called apoptosis—these cells naturally die off and are destroyed by the immune system.

However, as we age—and due to immune system deterioration and certain environmental conditions—these senescent cells can hang around and emit terrible toxins that can affect normal cells. This build up of senescent stem cells can have a devastating, negative impact on healthy systems and can accelerate the aging process.

# The Science behind Stem•O•lytic

Sisel's **Stem•O•lytic** is a broad spectrum, proprietary blend of eight diverse and powerful natural senolytic compounds to not only encourage selective apoptosis but to assist the immune system in clearing out toxic cellular debris. This ongoing process facilitates the production of new replacement stem cells, thus increasing longevity and youthfulness and ending or delaying the effects of aging.\*

## One Size Does NOT Fit All

Since there are 220 kinds of senescent stem cells using different mechanisms to resist apoptosis, Sisel formulated a broad range, Super 8 Senolytic complex of apoptosis-supporting agents to maximize results.\*

## Stem•O•lytic Super 8 Complex

• **Quercetin** is a natural flavanol compound derived in phytosome form for easy absorption in the bloodstream that can dramatically support a decrease in the number of senescent cells.\*

\* These statements have not been evaluated by the Food and Drug Administration. This product is not intended to diagnose, treat, cure or prevent any disease.

• **Fisetin** is considered the most powerful natural senolytic compound and has been known to promote longevity.\*

• **Sclareol Extract** has been shown to have tremendous apoptotic support without damaging healthy cells.\*

• **Apigenin** is a flavonoid that is found in many Chinese medicinal herbs. Specifically, Apigenin has many compelling physiological functions including intense support for promoting apoptosis.\*

• **Curcumin** is a highly effective ingredient that supports apoptosis, keeps the immune system functioning optimally, and is thought to be especially effective in brain health.\*

• **N-Acetyl Cysteine** supports the production of Glutathione, which plays an important role in the body's detoxification process and as a regenerative antioxidant that can bolster the immune system and support apoptosis.\*

• **Piperlongumine Root Extract (Piper Nigrum L.)** aids in the absorption of the other Super 8 Complex ingredients and has powerful apoptotic support for the immune system.\*

• **Pyridoxine** is an effective ingredient that supports the body's naturally programmed cellular death mechanism (apoptosis).\*

# The Road to Immortality

**Step 1 – The A.G.E. Pill** helps maintain and restore youthfulness to active stem cells by supporting the clearing out of cellular garbage and build up that can inhibit normal cell function. This powerful formulation feeds your stem cells with nutraceutical precursors to enhance the cell's ability to repair, regenerate, restore itself, and to produce energy-giving NAD+.\*

**Step 2 – TSX** supports long telomeres, which protect our genetic data and are believed to be important for rapid, youthful regeneration of new replacement cells by stem cells.\*

**Step 3 – Stem•O•lytic** helps support and maintain the immune system's role in apoptosis and autophagy (the consumption of inhibiting biological waste created from cellular death).\*

**Step 4 – H2 STIX** create Diatomic Hydrogen (H2) water. As the smallest molecule in existence, hydrogen will pass into most of the body's 30 to 40 trillion cells, supporting a wide range of hydrogen-dependent biological activities in creating energy and neutralizing toxins and free radicals.\*
